

**PRAXIS**  
CLINICAL EVIDENCE & LEARNING HUB

CLINICAL RESEARCH ORGANIZATION

---

# From clinical questions to evidence that creates value.

We design and manage clinical studies for  
pharma, medtech and nutraceutical companies.

---

CLINICAL EVIDENCE. MADE OPERATIONAL.

---

Scientific expertise and operational management  
combined in one partner.

# We give your study structure and continuity.

Modular support: from scientific planning to field operations and the communication of results.

01

## Strategy and study design

Research question, objectives, endpoints, study design, synopsis and protocol.

02

## Documentation and start-up

Study documents, site materials and support in preparing submissions for required reviews.

03

## Site coordination

Operational planning, site activation, training and alignment between sponsors and investigators.

04

## Study conduct and monitoring

Oversight of activities, initiation and monitoring visits, log management and document traceability.

05

## Data and digital tools

eCRFs, data collection and review, query management and study documentation.

06

## Analysis and communication

Support for analysis, final reports, scientific materials and the path to publication.

# From study to publication.

Praxis connects scientific decisions, operational processes and data quality throughout the study.

**01**

## **Define**

We define the clinical question, study population, endpoints and work plan.

**02**

## **Activate**

We prepare documents and tools, coordinate sites and organize start-up.

**03**

## **Manage**

We oversee conduct, documentation and data flow through regular checks.

**04**

## **Communicate**

We consolidate results and turn them into reports and scientific communications.

**One partner, scientific expertise and operational oversight.**

## **AREAS OF EXPERTISE**

---

# **Evidence for real-world decisions.**

**NUTRACEUTICALS**      Studies of efficacy, safety and outcomes relevant to scientific positioning.

---

**MEDTECH**              Clinical evaluations and data collection under intended conditions of use.

---

**PHARMA**              Clinical studies and evidence projects supporting product development and use.

---

**Let's discuss your study. From the first idea to an operational plan.**
